

CALENDER TO TRADING DAY CONVERSION

CTC is the calender day to trading day count conversion. Calendar day chart takes into account Saturday, Sunday and holidays while plotting the graph. Hence the high and low price swings have different count of time in this graphs compared to the trading day chart. If this count is overlayed on trading day chart we get considerable hits on turning points, and since calendar day count is always larger, we get tentative points of future turning points on trading day chart in advance.

For applying this tool on the chart –

- Click on the  option.
- CTC window will pop up.
- Click on respective points on calendar day chart.
- Press plot and now select point on trading day chart.
