Fibonacci & Gap scanner

Fibonacci scanner :- Whenever scrip changes its direction, there is retracement in any trend. The major retracement levels are 38.2%, 50% and 61.8%. According to Gann, 50% retracement is the best retracement. However, it is very difficult for a trader to keep a track of this retracement always. To have the perfect analysis of the retracement in the scrip we have introduced Fibonacci scanner in our Fortune + software. The scanner also gives us with the extension levels. So that the trader can take extra precaution at that levels. For using the scanner you just have to apply these retracement ones. Extensions will be automatically plotted on the chart as soon as you plot retracements. Whenever scrip reaches to the level, the scanner will intimate you. Ones you apply this retracement on the chart, rest of the work will be done by the Fibonacci Scanner. It will tabulate all the data in ready format and inform you which scrip you need to focus. Check the following screenshot to know how to interpret.

Chart - Once you populate the list, you have long list of charts. To open up a specific chart you need to click on the chart column which is before the scrip name.

Scrip	- Scrip name with a unique stamp to identify the details.
0.382%	- It is the 1 st retracement level.
0.50%	- 2 nd level of retracement.
0.618%	- 3 rd level of retracement.
1.618%	- 1 st level of extension.
2.618%	- 2 nd level of extension.
4.236%	- 3 rd level of extension.
Current Price-	It will show the current price of the scrip.
Del-	by clicking on delete you can delete data entry that is not relevant.

You can click on the title of the any column to sort, by doing this you will know which scrip is close to the level mentioned.

GAP & Demand supply zone Scanner:-

Gaps are the area on the chart where the price of the stock moves sharply up or down from the previous days close with no trading occurring in between. It is universal truth that the gap is always get filled, it may be in intraday or within some days, in some months or may be in some years. The scrip comes down or goes up for filling the gap. It comes exactly to the level of gap, fills it and often turns its direction. So it is important to mark the gaps. We mark the gaps but many times forgot to maintain a record of it, thus these opportunities go unnoticed.

In Fortune+, we have a scanner which gives us alert of the scrip which are filling the gap. We just have to mark the gap and the rest of the work will be done by the scanner. Whenever the scrip reaches to the level of the gap, scanner will give you the alert so that you will be cautious at that level.

We have also added demand /supply zone in the scanner. So that the chances of getting trend reversal will be more. You just have to mark the gaps, demand/ supply zone. The scanner will tabulate all the data in ready format .

Check the following screenshot to know how to interpret.
